

Trends in the European Investment Fund Industry
in the Third Quarter of 2008
and
Results for Year-To-Date

This report was prepared by Bernard Delbecque, Director of Economics and Research

EFAMA

The European Fund and Asset Management Association

Square de Meeûs, 18 - B-1050 BRUXELLES - Tel. 32-2-513.39.69 Fax: 32-2-513.26.43 - e-mail: info@efama.org

Highlights, January-September 2008

- For the first nine months of 2008, UCITS¹ recorded total net outflows of EUR 193 billion, compared to net inflows of EUR 47 billion in 2007 and EUR 348 billion in 2006. The stunning magnitude of the recent decline in stock prices and the chaos in credit markets that started in 2007 engendered a deep loss of investor confidence, accelerated in September with the bankruptcy of Lehman Brothers. Strong competition from banks in search of liquidity continued to exert its adverse effect on the industry, spurring a substitution from investment funds to bank deposits.
- With a total of EUR 134 billion of net outflows through September, equity funds suffered the most, followed by bond and balanced funds (EUR 105 billion and EUR 16 billion, respectively). In contrast, money market funds gained EUR 72 billion net.
- As a percentage of UCITS assets, net redemptions in January-September remained limited to 3.5 percent. In a way, this is comforting news showing that investors on average are holding their UCITS on a net basis, despite plummeting asset prices. But nevertheless the combination of market losses and ongoing net outflows has caused a significant decline in European investment fund assets (EUR 1,065 billion or 13.5 percent between end 2007 and end September 2008), which is leading to cost-cutting and rationalization measures.
- Looking forward, the economic contraction in the United States, Europe and other advanced economies, the risk of severe slowdown in emerging markets and the level of uncertainty stemming from financial market developments remain a serious source of concern for many investors. Hopefully, the bailout plans, stimulus packages and other bold actions will succeed in restoring financial stability and supporting economic activity on a sustainable basis.

¹ UCITS is used in this not in the sense of publicly offered open-ended funds investing in transferable securities and money market instruments.

Trends in the UCITS Market

Net Sales by Investment Type

Outflows from UCITS increased in the third quarter of 2008 to EUR 92 billion. It is the first time ever that the UCITS industry has recorded such a high level of outflows in a single quarter. Outflows rose as investors searched for havens in the midst of unprecedented volatility in bond and credit markets and alarming news from the real economy.

The development reflected a worsening in net redemptions from all categories of long-term UCITS (equity, bond, balanced and other) compared to the second quarter. Money market funds were the only fund category that recorded net inflows. Taking into account net inflows into Irish money market funds, which are not included in our net sales data, money market funds would also have reported net outflows (estimated to EUR 15 billion).

UCITS net redemptions during the third quarter represented 1.9 percent of UCITS assets (2.5 percent for equity funds and 3.8 percent for bond funds).

Trends in the UCITS Market

Exceptionally Harsh Market Conditions

The collapse in net sales of equity funds is deeply rooted in the evolution of stock prices. The memory of the stock price losses endured during the bear market in 2001 and 2002, against the background of high valuation reached in early 2007 and increasingly attractive high yields offered by bank deposits, convinced investors to start withdrawing from equity funds during the first half of 2007. Unsurprisingly, investors have been on alert from the start of the financial crisis.

Investor demand for bond funds mirrors movements in long-term interest rates. When interest rates fall, inflows into bond funds tend to rise, and when they are on a rising trend, investors redeem their shares in bond funds. Hence, recent outflows reflected in part unfavourable rising long-term interest rates. The crisis in money markets and credit markets added further pressure on bond funds.

Rising short-term interest rates benefited money market funds in 2006. The trend continued in 2007 and so far this year, albeit at a slower pace because of several factors: enhanced competition from banks issuing debt securities at higher rates than money market fund returns to cope with their liquidity crisis, drying-up of liquidity in money markets and contagion from the difficulties of U.S. money market funds following the Lehman default.

Looking in the future, falling long and short-term interest rates against the backdrop of a global economic downturn and evaporated inflation worries could create the conditions for a rebound in the demand for bond funds, possibly at the expense of money market funds. With stock prices having fallen so fast in recent months, equity funds have also the potential to attract again net inflows. Yet, this change of direction will require that governments and central banks manage to convince investors that their actions will succeed in limiting the severity of the global economic downturn.

Trends in the UCITS Market

Net Sales by Country of Domiciliation

Looking at the major fund markets, Luxembourg-domiciled UCITS suffered outflows of EUR 17.3 billion in the third quarter, compared to inflows of EUR 11.3 billion in the second quarter. The turnaround reflected an increase in outflows from equity and bond funds. Net inflows in UK-domiciled UCITS also turned negative in the third quarter, following two quarters of positive net sales. In the other major markets, France-domiciled UCITS continued to record outflows, with absolute return and dynamic short-term funds suffering the most. In Germany, local funds and “round-trip” funds domiciled in Luxembourg and Ireland recorded outflows (EUR 4.8 billion and EUR 2.2 billion, respectively). In Italy, net outflows from local funds (UCITS and non-UCITS), round-trip funds and funds promoted by foreign companies amounted in the third quarter to EUR 16.0 billion, EUR 7.9 billion and EUR 5.0 billion, respectively. Elsewhere in Europe, net outflows were also significant in Spain (EUR 12 billion) and Ireland (estimated at around EUR 30 billion).

In absolute terms, three countries suffered the most severe outflows in January-September: Italy (EUR 54 billion), Spain (EUR 42 billion) and France (40 billion). Luxembourg followed in this ranking with outflows of EUR 17 billion. In relation to UCITS assets at end 2007, outflows remained negligible in Luxembourg and the United Kingdom (less than 1 percent), and small in France (3 percent) and Germany (4.5 percent). In Spain and Italy, net outflows reached considerable levels (16 percent and 19 percent, respectively), reflecting strong competition from bank deposits at the distribution level. UCITS continued to face the same difficulties in Greece and Portugal.

Trends in the UCITS Market

Net Assets by Investment Type

Total net assets of UCITS fell by 6.4 percent in the third quarter to reach EUR 5,181 billion at end September 2008. Over 77 percent of the fall reflected a decline in equity fund assets, with stock price losses causing 82 percent of the decline.

Since end 2007, total assets in UCITS decreased by 15.9 percent. This development is attributable to a large extent to a staggering loss of equity fund assets caused by the stock market fallout. By way of illustration, the DJ broad Europe STOXX 600 index fell by 29 percent between end 2007 and September 2008. For the UCITS market as a whole, 21 percent of the asset decline reflected net outflows, whereas market losses represented the remaining 79 percent.

Reflecting this evolution, the share of equity fund assets in total UCITS assets fell from 40 percent at end 2007 to 33 percent at end September 2008. Money market funds made up for the difference with a share of assets totalling 23 percent at end September, compared to 16.5 percent at end 2007.

Trends in the UCITS Market

Net Assets by Country of Domiciliation

During the third quarter of 2008, the decline in UCITS assets clustered around the European average (6.4 percent) in most countries. However, there are a few exceptions. The relatively high proportion of money market funds that characterizes the investment fund market in France provided a cushion against stock market losses. Conversely, the asset decline was steeper in countries with a relatively high proportion of equity fund assets, especially in the United Kingdom, Sweden and Norway.

Between end 2007 and end September 2008, the United Kingdom, Italy, Spain and Germany suffered the sharpest decline in assets – in the range of 20 to 26 percent. The fall of UCITS was limited to 11 percent in France and Ireland, thanks to the importance of money market funds in these countries. Luxembourg lies in between these groups of countries, with a fall of UCITS assets of 15 percent.

Elsewhere, the drain from UCITS to banking products continued to affect badly the fund industry in Portugal and Greece. The Nordic countries are also suffering from the crisis, with an average asset decline of 23 percent in January-September. In Central Europe, the asset decline remained moderate in the Czech Republic, Hungary and Romania in January-September, and UCITS domiciled in Slovakia even managed to rise by 9 percent. On the other hand, Poland and Slovenia suffered from a sharp drop in assets, reflecting the relatively high proportion of balanced and equity funds.

Trends in the Non-UCITS Market

Net Sales and Assets by Investment Type

Total assets in the non-UCITS ² market decreased by 2 percent to EUR 1,663 billion, down from EUR 1,696 billion at end June 2008.

The strong resilience of special/institutional funds to the financial crisis so far has limited the impact of stock market losses on fund assets. Overall, a net EUR 46 billion flowed into special funds in 2008 through the end of September, with Luxembourg and German funds collecting 96 percent of the new money.

Since end 2007, total assets of non-UCITS fell by 4.9 percent or EUR 86 billion.

Trends in the European Investment Fund Industry

Net Assets by Country of Domiciliation

The combined assets of the investment fund market in Europe, i.e. the market for UCITS and non-UCITS, fell by 5.4 percent in the third quarter to reach EUR 6,844 billion.

Since end 2007, the European investment fund industry has seen its assets fall by 13.5 percent.

With EUR 5,181 billion invested in UCITS, this segment of the business accounted for 75.7 percent of the fund market at end September 2008.
